

Cathodic Molds

nVent ERICO Cadweld Cathodic Connections are the preferred method of exothermically welding cathodic protection anode leads to pipes (steel or cast iron), tanks, and other structures. Cathodic protection systems are designed to prevent galvanic corrosion along a pipeline or in various structures. nVent ERICO Cadweld Cathodic Connections use a special welding material alloy to minimize heat effect on the steel, which is especially important on thin wall and high stress pipes.

Cable to Metal Surface, Cathodic

Cadweld graphite mold designed and engineered to create cathodic cable to metal surface exothermically welded connections.

Lug or Busbar to Steel, Cathodic
